Research Interests

Chanjun Park is a researcher in the field of Natural Language Processing (NLP), with a focus on Data-Centric AI, Machine Translation and Large Language Models (LLM). He is currently working as a Principal Research Engineer & Technical Leader at the Upstage LLM Team. His current interests include forming an LLM-based ecosystem, and he has initiated projects such as SOLAR, Open Ko-LLM Leaderboard, Dataverse, Evalverse and Up 1 Trillion Token Club. In 2023, he received his Ph.D. from Korea University, supervised by Professor Heuseok Lim, for his work on “Data-Centric Neural Machine Translation”. From 2018 to 2019, he worked at SYSTRAN as a Research Engineer. Chanjun is the founder and chief scientist of the KU-NMT Group, and has received the Naver Ph.D. Fellowship in 2021. He served as the Virtual Social Chair at COLING 2022, and is currently serving as the Program Chair for the WinLP Workshop and Publication Chair for the DMLR Workshop. He has published more than 190 papers in the field of NLP. Finally, he is selected for Forbes 30 Under 30 Korea in the SCIENCE / SW field.

My research philosophy is anchored in service-driven research, focusing on bridging the divide between foundational natural language processing (NLP) theories and their practical, real-world applications. I am committed to developing straightforward yet effective research methodologies that deliver immediate and tangible benefits to the industry, while also advancing our fundamental understanding of NLP. By emphasizing service-oriented research, I aim to address the industry pressing needs with innovative solutions that are both accessible and impactful. My recent primary interests lie in the development of efficient, purpose-trained Large Language Models (LLMs), with particular focus on: (1) fundamental capabilities of LLMs; (2) evaluation of LLMs; (3) foundational NLP research addressing recency and truthfulness in LLMs; (4) cross-lingual NLP; and (5) multidisciplinary NLP research that bridges disciplines to advance NLP applications. Through these avenues, I strive to contribute to both the academic and practical advancements in the field of NLP.

RESEARCHER IN ELEUTHER AI

September. 2022. - May.2023

- Various multilingual models such as mBERT, BLOOM, and XGLM have been released. Therefore, someone might ask, "why do we need to make multilingual models again?" Before answering the question, we would like to ask, "Why do people around the world make monolingual models in their language even though there are already many multilingual models?" We would like to point out there is a dissatisfaction with the non-English language performance of the current multilingual models as one of the most significant reason. So we want to make multilingual models with higher non-English language performance. This is the reason we need to make multilingual models again and why we name them 'Polyglot'.
