LIFELONG RESEARCH OBJECTIVE

My lifelong research objective is to advance the frontiers of natural language processing (NLP) and pioneer new research areas that improve communication and knowledge access across languages and cultures. I study how foundation models acquire and represent capabilities and how their behaviors can be evaluated, controlled, and aligned with human intentions. I aspire to become a globally influential NLP researcher whose original contributions leave a lasting mark on the field.

RESEARCH INTERESTS

My research philosophy centers on service-driven research, bridging foundational advances in Natural Language Processing (NLP) with real-world impact. My work spans NLP and foundation model development, with the overarching goal of advancing trustworthy language intelligence through five core pillars: reliability, interpretability, controllability, safety, and privacy. Through rigorous benchmarking, behavioral and mechanistic analysis, and parameter-level investigation, I seek to understand, evaluate, and shape model capabilities, broadening the foundations and applications of NLP.
