LIFELONG RESEARCH OBJECTIVE

My lifelong research objective is to build intelligent systems that enable reliable communication and knowledge access across linguistic and cultural boundaries. Toward this goal, I study how foundation models acquire and represent capabilities, how their behaviors can be rigorously evaluated, and how they can be effectively controlled and aligned with human intentions. Ultimately, I aim to advance foundation models that are both capable and trustworthy under meaningful human control.

RESEARCH INTERESTS

My research philosophy is centered on service-driven research, bridging foundational advances in Natural Language Processing (NLP) with real-world impact. My research focuses on evaluating, understanding, and controlling foundation models through rigorous benchmarking, behavioral analysis, and parameter-level investigation. I extend these principles to trustworthy language models and reliable AI agents, with particular emphasis on safety, robustness, and controllability.
